Work should be designed to prevent damage to riparian zone adjacent to channel. Work should be conducted from one side of channel whenever possible.

Debris will be disposed of off-site when possible to minimize impacts to adjacent riparian areas and to minimize detriment to water quality and disposed off in a approved landfill if not chipped on-site.

Reseeding of riparian zone will be required after removal to minimize run-off effects in riparian zone in accordance with (342) Critical area treatment found in EFOTG Section IV.

Removal will be done in consecutive days to minimize impacts to local wildlife.

Section 5A Findings

Finding: Indicate the preferred alternative from Section 2 (Enter to Section 1E):

The proposed action is the preferred alternative. The proposed action is the least costly alternative that achieves the restoration objectives, maximizes environmental benefits and is socially acceptable. Remove and dispose of debris and large trees from the channel using conventional methods from either top bank as appropriate.

I have considered the effects of the action and the alternatives on the Environmental Economic, Social; the Special Environmental Concerns; and the extraordinary circumstances (40 CFR 1508.27). I find for the reasons stated below, that the preferred alternative:

____ Has been sufficiently analyzed in the EWP PEIS (reference all that apply)
Chapter 5.2.2.1.2
Chapter _____
Chapter _____
Chapter _____
Chapter _____

____ May require the preparation of an environmental assessment or environmental impact statement.
